Subject: Plans for tomorrow
Date: Thursday, June 23, 2016 5:41:23 PM

Good Afternoon, Mr. Tonetta - after our conversation, we have been in touch with NJDEP and one of our OSCs, Dwayne Harrington, went to the site today and spoke briefly with the owner. In that conversation, the owner indicated to Dwayne that he would be bringing his engineer on site on Monday, June 27th to evaluate the situation.

It was my understanding from speaking with you that the deadline was tomorrow, June 24th. We would like to arrange a phone conversation with you (and anyone else you think should participate) before making arrangements to bring a contractor to the site and pump the ammonia. We want there to be a clear understanding that this is how you want us to proceed. It is unfortunate, but according to Dwayne, there is still a large amount of frozen fish on site and the other warehouses in the area are full.

Please reply with the best number to reach you tomorrow - and let us know if around 9:00am would work.

Many thanks,
Ellen
